OBJECTIVE

Innovative and detail-oriented Python Django and Flutter Developer with more than 2 years of experience. Proficient in developing and reliable web and mobile applications, with expertise in hosting solutions like VPS and AWS. Seeking to leverage skills to contribute to impactful projects

EXPERIENCE

December 2022 - Present

- **Python Developer**
Zap Solutionz
 - Designed and implemented scalable web applications using PHP & Django framework.
 - Integrated MySQL and Redis database for optimized backend performance.
 - Developed RESTful APIs for seamless client-server communication.
 - Deployed applications on VPS and AWS environments for enhanced accessibility.
 - Collaborated with cross functional teams to ensure timely project delivery.

February 2023 - Present

- **Flutter Developer**
Zap Solutionz
 - Built cross platform mobile application using Flutter framework
 - Integrated Firebase for real-time database management and analytics.
 - Implemented state management techniques including GetX, setState and BLoC for efficient app architecture.
 - Applied MVVM design pattern to enhance code modularity and testability
 - Optimized UI/UX design for enhanced user experience.
 - Conducted testing and debugging to ensure app stability and performance.

EDUCATION

2024

- **University of Mumbai, Maharashtra**
Master of Science in Computer Science

2022

- **University of Mumbai, Maharashtra**
Bachelor of Science in Computer Science

SKILLS

- Programming Language: Python, Dart, PHP, Javascript, C++
- Frameworks and Library: Django, Flutter and Numpy, Pandas, Matplotlib, seaborn
- Web Technologies: HTML, CSS, Tailwind, Bootstrap
- Databases: MySQL, Firebase, Sqlite, PostgreSQL
- Tools & Platforms: Celery, Redis, VS Code, XAMPP
- Hosting Solutions: VPS, AWS, Firebase Hosting
- Other Skills: Version Control (Git), RESTful APIs, CI/CD, Agile Methodologies

PROJECTS

- **Society Manager**
Overview: Society Manager is a comprehensive application designed to streamline the management of residential societies through a robust multi-panel system. The project includes four key components: a mobile app for flat members & vendors (such as electricians and plumbers), web application for admin & super admin.
Technologies Used:
Frontend: Flutter for mobile and web apps,
Backend: RESTful API, Firebase or similar for real-time database management
Database: Cloud Firestore or Firebase Storage for data storage
Authentication: Firebase Authentication or OAuth for secure access control
- **Ticket Management System**
Overview: The Ticket Management System is a dual-platform application comprising an Android app for users and a web application for administrators. An admin web application and a user Android app. The admin allows administrators to create and manage user accounts by adding names, mobile numbers, and passwords. It also enables building management, where admins can input details such as building names, the number of floors, rooms per floor, and assets in each room.
Frontend: Android SDK for the mobile application, web application.
Backend: Firebase Firestore, Firebase Storage.
Tools: VS Code IDE, version control (Git), and project management software.
